

Heart Foundation

Jump Rope for Heart

Thank you from the bottom of our hearts to the parents and friends of Nobby State School for supporting Jump Rope for Heart in 2013. Through your support the students successfully raised \$1044.

The Heart Foundation relies on the donations of everyday Australians to continue its important work. Funds raised go towards important programs, projects and resources, as shown below, so please let your children and family know what their hard earned sponsorship money will be used for!!!!

AMOUNT	FUNDS
\$25	provides one of the most basic lab tools necessary for such work – a petri dish. This will help with understanding how heart cells work which is a key element to preventing and treating heart disease.
\$100	pays for a DNA test that can help determine the genetic factors that are important in heart disease. Such knowledge can help identify people at high risk of heart disease, and lead to new, innovative treatments.
\$300	a researcher can obtain an antibody to detect viral or bacterial infection in the heart. Solutions begin with an understanding of the problem.
\$2,000	pays for the examination of a person's genetics, to help determine the importance of genetic factors in heart disease. The can facilitate greater understanding of how and why heart disease effects certain people and lead to new, innovative treatments.
\$10,000	funds six months of research studies for a Heart Foundation PhD Scholar. Hands-on experience and education is vital to establishing the next generation of great scientists.

Thank you for your support!
